JAIGAD FORT

Jaigad Fort (Marathi: जयगडकिल्ला, Jayagaṇakillā) (Also transliterated as Jayagan in old British records.) is a coastal fortification that is located at the tip of a peninsula in Ratnagiri District at a distance of 14 km from the temple town of Ganpatipule, in the state of Maharashtra, India. Nestled on a cliff, it overlooks a bay formed where the Shastririver enters the Arabian Sea.^[3] It has a commanding view of the bay, the nearby power plant and the open sea. A jetty port Angrey, and a lighthouse is located nearby. Although in ruins, most of the fort's outer wall and ramparts still stand. A deep moat surrounds the fort side not facing the cliff edge. In the middle of the 13 acre fort lies the palace of Kanhoji Angre, a Ganpati temple and wells to store water. It is a protected monument.

History

Jaigad fort is said to have been built by Bijapur Kings in the 16th century. Later it passed into the hands of Naiks of Sangameshwar. He had 7-8 villages and 600 troops under his command. He defeated combined forces of Bijapur and Portuguese in 1583 and 1585. In 1713 Jaigad was one of the ten forts which was ceded by Balaji Vishwanath Peshwa to Angre. In June 1818 this fort was captured by British without any struggle.

The power station is located in Jaigad, in the Ratnagiri district of Maharashtra. It is owned by JSW Energy, a company controlled by the Mittal family. The final unit began commercial operation in October 2011.

3,200 MW expansion put on hold

The 3,200 MW Ratnagiri Power Plant expansion has been proposed by JSW Energy for the same location. Maharashtra is among India's most industrialized states, and is reportedly seeking to make itself an "attractive investment destination" for manufacturers to maintain its dominance in the sector. In July 2011, JSW Energy said it was delaying expansion of its 3,200 MW coal plant in Ratnagiri as it waits for coal-price "clarity" from Indonesia and Australia.

PROJECT DETAILS FOR 3200 MW EXPANSION

Sponsor: JSW Energy

Location: Jaigad, Ratnagiri district, Maharashtra

Coordinates: 17.296375, 73.213105 (exact)

Status: Cancelled

Capacity: 3200 MW (4 x 800 MW)

Type: Supercritical Projected in service:

Coal Type:

Coal Source: Imported through JSW Jaigarh Port

Estimated annual CO₂:

Source of financing:

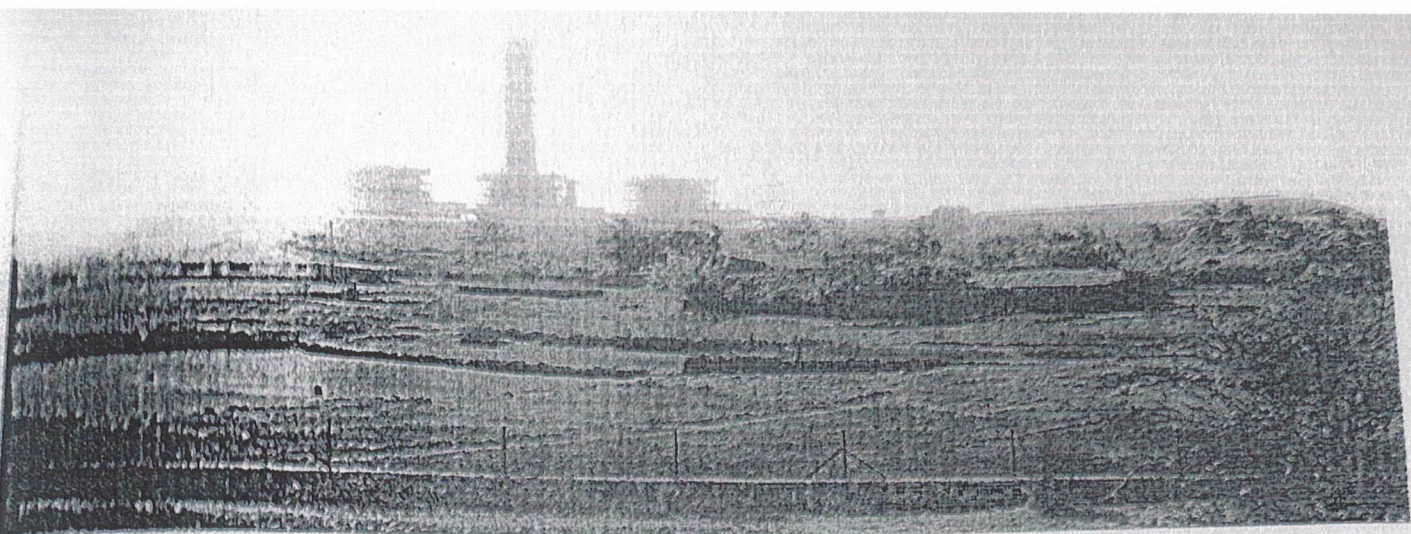

Permits and applications: Phase I, Units 1-4: Environmental

Clearance, India MoEF, May 17, 2007

JAIGAD PORT(JSW)

JSW Jaigarh Port is the first deep water, all-weather, 24/7 private port in Maharashtra. Inaugurated in August 2009, the JSW Jaigarh Port is built in a record time of 20 months. This greenfield, all-weather port occupies a strategic location on the west coast, as it is situated between the ports of Mumbai and Goa.

Currently, the port is fully operational with 4 berths having a cargo handling capacity of 40 million tonnes per annum. Jaigarh aims to become one of the most modern and mechanized ports in India, benchmarked to international standards. The Port intends to be the first choice for all customers in Maharashtra and Karnataka by adopting and developing the latest technology. Jaigarh Port offers port related services in a way that ensures enduring value to the customers, community and environment.

In Phase II, the capacity will be expanded to 80 million tonnes with a total of 10 berths (catering to: RoRo, liquid, containers, break bulk and bulk cargoes)

Waves are generated by wind passing over the surface of the sea. As long as the waves propagate slower than the wind speed just above the waves, there is an energy transfer from the wind to the waves. Both pressure differences between the upwind and the lee side of a wave crest, as well as friction on the water surface by the wind, making the water to go into the shear stress causes the growth of the waves.^[5]

Wave height is determined by wind speed, the duration of time the wind has been blowing, fetch (the distance over which the wind excites the waves) and by the depth and topography of the seafloor (which can focus or disperse the energy of the waves). A given wind speed has a limiting practical limit over which time or distance will not produce higher waves. When this limit has been reached the sea is said to be "fully developed".

In general, larger waves are more powerful but wave power is also determined by wave speed, wavelength, and water density.

Oscillatory motion is highest at the surface and diminishes exponentially with depth. However, for standing waves (clapotis) near a reflecting coast, wave energy is also present as pressure oscillations at great depth, producing microseisms.^[5] These pressure fluctuations at greater depth are too small to be interesting from the point of view of wave power.

The waves propagate on the ocean surface, and the wave energy is also transported horizontally with the group velocity. The mean transport rate of the wave energy through a vertical plane of unit width, parallel to a wave crest, is called the wave energy flux (or wave power, which must not be confused with the actual power generated by a wave power device).

(Arts, Commerce & Science)

Etymology

According to local folklore, the Hindu god Ganapati, taking umbrage at a remark made by a native lady, moved to Pulé^५ (a few km before the town) from his original abode of Gulé. Thus the region was named Ganpati pulé.

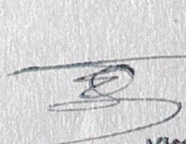

The 100-year-old Ganpati idol at Ganpatipule is said to have sprung up from the soil.^[4] This deity faces the west, so as to guard the western shores, unlike deities in other Indian temples who face the east. The temple is at the base of a hill, and pilgrims walk around (pradakshina) the hill as a mark of respect.

Geography and history

Ganpati temple

Ganapatipule is approximately 375 km. south of Mumbai, along the Konkan Coast. It is a very small town with about 100 houses, and one of the most spectacular beaches along the Konkan Coast – an idyllic getaway that attracts peace-seekers, beach lovers, and pilgrims.

Tal. Santhala, Dist. Kolhapur

alike. The temple of Swayambhu (self-originated) Ganesh is much frequented by thousands every year. The God is considered to be the PaschimDwarpalak (Western Sentinel God of India).¹⁵¹ and those who visit Ganapatipule make it a point to pay their respects to this deity. In addition to its clean beach and clear waters, Ganapatipule is rich in flora, including mangroves and coconut palms.

Ganapatipule is governed by the GanapatipuleGrampanchayat.

Climate

Winter (late October to mid-February) is the most pleasant season, with temperatures dropping at night. From March, the temperature starts rising but rarely crosses 30 °C. May is the hottest month, with temperatures reaching 40 °C. The monsoon lasts from June to October, when rains are usually plentiful and regular.

Demographics

Marathi is the most widely spoken language. Hindi and English are understood and spoken by many. There are Marathi medium schools run by GanapatipuleGrampanchayat / Ratnagiri. The nearest college is at Malgund. There are many villages in Ganapatipule which are full of greenery. The main occupation of the villagers is agriculture. Rice and coconut are the most common crops in this area. Many festivals are celebrated along the Konkan Coast. Among the most significant are GoriGanpati and Mughit Jhaturthi (the fourth day of the lunar month of Magh).
